

KREATE

Unisol™ Tinting for Solvent Borne Industrial Coatings

Unisol™ is the latest Industrial colorant system designed for the most demanding and high performance solvent based industrial coatings.

A broad range of non aromatic, high performance colorants with a broad compatibility across industrial technologies, Unisol™ provides a flexible and versatile choice to the coatings producer.

Unisol™ incorporates a range of pigmentation carefully selected to provide excellent opacity, weather resistance, heat & light resistance as well as chemical resistance. Highly pigmented the Unisol™ colorants have a lower VOC content compared with older systems and therefore reduce any effect and quantity of addition to the final coating system.

Broad Compatibility

Designed to satisfy a broad spectrum of coatings, Unisol™ includes a large selection of colorants from which the coatings producer can utilise to construct the final range of colorants most suitable for their market. The pigments used within the range ensures that colour areas, such as Bordeaux, deep yellows, Magenta and Violet areas are well covered. Unisol™ comes complete with a ready and flexible formulation data bank of colour formulations of all the major Industrial colour ranges used within the coatings market. With a ready built matching database in a range of technologies, whatever the coating manufacturers market Unisol™ can be adapted to fit their requirements. Typical uses include technologies ranging from Long to Short Oiled Alkyds through to polyesters, 2 pack PU, epoxys, and Nitro Cellulose as examples.

Flexible Base Structure

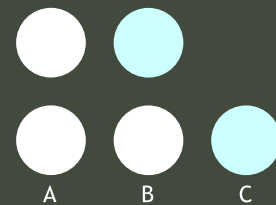

Because no two markets are the same and because coating manufacturers normally have to produce not only a range of technologies but qualities within them, Unisol™ has been designed from scratch to allow a completely flexible base structure. A range of bases as well as base strengths can be employed within not only one system but between product lines.

- Non Aromatic
- Broad Compatibility
- Highly controlled
- Volumetrically controlled
- Complete range
- Flexible construction
- Highly pigmented Low VOC
- Flexible base structure
- Excellent machine stability
