

KREATE

Uniteq™ Specialist 100% Solids Universal Colorants

Uniteq™ is a complete range of universal, 100% solids, VOC and emission free colorants designed specifically for specialist coating applications.

Uniteq™ has been developed as a range of high performance colorants with significantly improved compatibility for high-build, reaction-cured technologies such as Epoxys and Polyurethanes.

Demand for high performance VOC-free coating systems, especially for self-levelling flooring, has and is developing strongly. Consequently so is the need for wider ranges of colour particularly in full tones and smaller batch sizes of specific colours.

Due to the limitations of traditional colorant technologies in-can or small batch tinting has not been easily achieved in these types of products, consequently colour availability or range has been severely limited. As a non-reactive system with high pigment loading, Uniteq™ enables our customers to produce a wide range of colours without disturbing the reactivity of the coating system either in its non-catalysed or catalysed state.

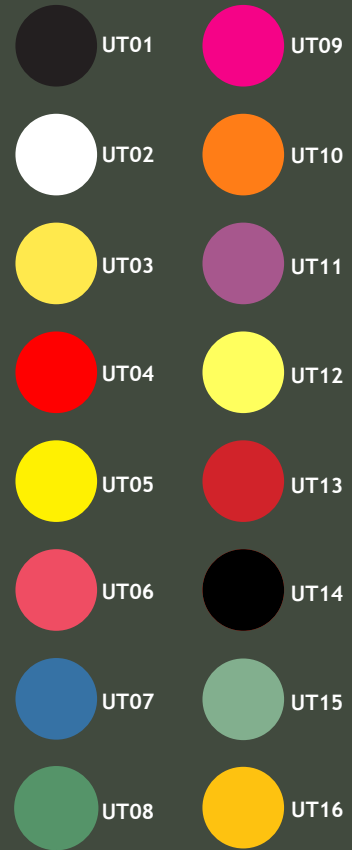

Uniteq™ incorporates a range of pigmentation carefully selected to provide excellent opacity, weather resistance, heat & light resistance as well as chemical resistance. The system is supported with an extensive colour formulation library as well as comprehensive matching backup.

Uniteq™ has superb machine stability meaning that it is ideally suited to production dispensing or point of sale dispensing. KREATE is also able to fully support the implementation of software across the variety of dispensing equipment available in the market.

Advantages

- Non Reactive
- Non Aromatic
- Emission Free
- Non Yellowing
- High Performance Pigment Selection
- Highly Pigmented, VOC free
- Excellent light and chemical fastness
- Flexible Base Structure
- Improved Final Product Performance
- Machine Stable and Volumetrically controlled
- Matching & Database Support
