

KREATE

Aquaplus™ Universal Colorants

Aquaplus™ is a comprehensive range of universal colorants, designed for use with a wide range of architectural decorative coatings both water borne and solvent borne. Aquaplus™ technology is solvent free and APE free, meeting and exceeding the demands of current environmental legislation.

Aquaplus™ has been developed from a range of inorganic and organic pigments, with a variety of pigment strengths, allowing the coatings manufacturer to optimise a selection of colourants that are tailored to their specific market requirements. This ensures a balance of quality, cost and flexibility when producing colours in almost any pack size.

Whether tinting silicone, silicate, wood stains, pliolites, water-based or solvent based products or interior and exterior Latex paints, a selection of Aquaplus™ colorants can be made to ensure that technically and commercially our customers have the right solution.

System Design

Different markets, with different requirements and therefore different products with varying specifications mean the 'one system fits all' approach is no longer applicable in today's mature tinting markets. Aquaplus™ is designed to fit our customers markets, and our customer's products, rather than fitting their products to our tinting system.

The Aquaplus™ system is designed to be built-up with a colourant selection made together with our customers, considering factors such as opacity, light fastness, as well as accuracy and durability in the choice of a final colourant combination.

Aquaplus also works flexible with different combinations of tinting bases, from a standard clear and white combination through to multiple whites or coloured bases.

Colour

The Aquaplus™ system has a comprehensive colour formulation database available, covering popular colour ranges from across European, Middle Eastern, African and global markets. In addition there is full matching backup, with databases built on multiple technologies supporting every colourant combination.

Customer specific colour ranges can be readily matched according to their specifications, and matching solutions can be extended to our customer's locations or even to point of sale.

All Aquaplus™ colorants are produced to exceptionally high tolerances ensuring absolute confidence in color reproducibility.

Advantages

- Flexible system design
- Solvent and VOC free
- Wide range of pigmentation
- Comprehensive matching support
- Broad compatibility
